

OPERATIONS & MANUFACTURING

See the gaps before the next build.

Bring material availability, purchase references and manufacturing progress together so your team can decide what happens next.

01

Spot material gaps

Compare build requirements with stock on hand and quantities already on order.

02

Follow purchase records

Review the purchase order and its related receipt and invoice references.

03

Understand build progress

Compare planned and built quantities alongside completed, active and pending work-order steps.

A CLEARER WAY TO WORK

1

Review the build

2

Check material gaps

3

Follow the records

4

Discuss the next move

Give the next build decision material and progress context.

Illustrative workflow - discuss your scope in a walkthrough.

Bring one operations challenge.

Let's walk through how your team could work with Azora.

A practical starting point.

A planned build is short of a component. The team reviews stock, open orders and manufacturing progress before choosing the next purchasing or production action.

FOR OPERATIONS LEADERS, BUYERS AND MANUFACTURING TEAMS

01**Review the build**

Identify the planned quantity and its bill of materials.

02**Check material gaps**

Compare required parts with stock and purchase-order quantities.

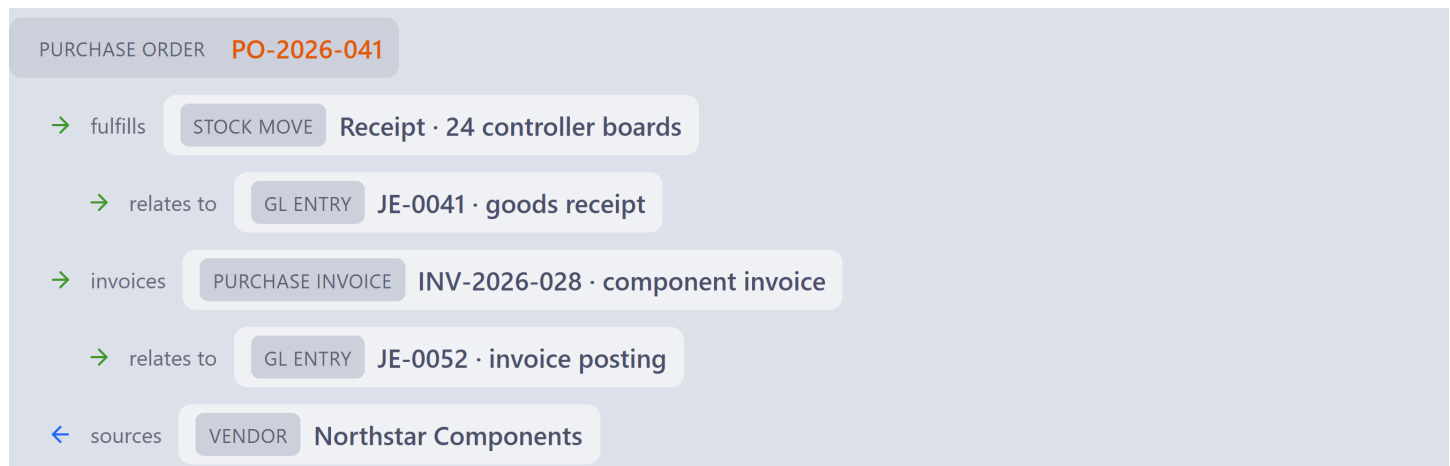

03**Follow the records**

Review the relevant order, receipt and invoice references.

04**Discuss the next move**

Use manufacturing progress to agree the next purchasing or production action.

A CLOSER LOOK INSIDE AZORA
